

**Massachusetts Department of Public Health
Arbovirus Surveillance Program Report
Report Date: August 8, 2011**

Key Public Risk Communication Messages for This Week:

1. We now have evidence that both EEE and WNV viruses are present in Massachusetts this summer. Personal protection is always the best defense against mosquito bites. Be aware of mosquito activity around you; if you notice that you are being bitten, consider repellent use, clothing to cover exposed skin and/or move indoors.
2. The recent rains followed by hot weather will cause an emergence of new mosquitoes this week creating the opportunity for more virus amplification and resulting in more infected mosquitoes. In addition to emphasizing personal prevention practices, dumping standing water should be strongly encouraged, particularly in areas where WNV has been regularly detected in mosquitoes.

WNV and EEE Virus Surveillance Summary	
Results contained in this report reflect data through 8/8/2011 inclusive of MMWR Week 31 (Sunday, 7/31/11 – Saturday, 8/6/11)	
Mosquito Surveillance	
Number of Mosquito Pools Tested	2071
Number of WNV Positive Pools	87
Number of EEE Positive Pools	4
Equine/Mammal Surveillance	
Number of Mammal Specimens Tested	4
Number of WNV Positive Horses	0
Number of EEE Positive Horses	0
Number of other EEE Positive Mammals	0
Human Surveillance	
Number of Human Specimens Tested	105
Number of Human WNV Cases	0
Number of Human EEE Cases	0
