

Attention homeowners

Are you thinking of having your roof done?

Every roofing contractor is **required** to have their workers use fall protection. In 2017, there were 381 deaths in the construction industry due to falls, and numerous injuries.

We are asking for your help to save lives and prevent injuries.

Confirm with your roofing contractor that they will be using fall protection when working at your home.

Fall protection saves lives, and prevents injuries. It's the law!

When fall protection is being used, workers are safe and complying with OSHA standards.

A= Anchor point B=Full Body Harness C=Lifeline

Guardrails or safety nets can be used instead of full-body harnesses, but you will rarely see this on a residential roofing job.

When no fall protection is being used, this is dangerous and violates OSHA standards.

If you do not see a safety harness being worn, talk to your roofing contractor. You could save a life!

Contractors and homeowners can learn more about fall protections by contacting the Massachusetts Department of Labor Standards' OSHA Consultation Program at (508) 616-0461 x9716. Information is also available at [osha.gov/SLTC/fallprotection](https://www.osha.gov/SLTC/fallprotection).
